

An increasing number of transport requests can only be fulfilled using different modes of transport across a multimodal supply chain.

The change of modalities increases the risk of possible disruptions and resulting delays, which cause downstream sub-sections to get out of sync.

With improved supply chain visibility, you regain room to maneuver!

COMPREHENSIVE TRANSPARENCY IN

Intermodal Supply Chains

WITH SYNFIOO

Realize **more efficient processes** through transparent supply chain management –

SYNFIOO PROVIDES CUSTOMERS WITH A REAL-TIME OVERVIEW OF THE ENTIRE SUPPLY CHAIN

This approach to bring everyone together is of importance for the shipper and recipient of the goods as well as the consignor and all contracted carriers - regardless of the transport option on which the cargo makes its way. **Our access to live data for all modalities, which exists nowhere else in the freight train and barge sectors, and news to disruption developments enables real-time monitoring of the entire supply chain.**

We offer full visibility, providing real-time data for every single modality: be it road, rail, barge, ocean or air.

PRECISE ETA PREDICTIONS

We collect real-time data on disruptive factors from over 70 external sources and provide accurate time of arrival (ETA) predictions.

- ✓ Avoidance of buffer times
- ✓ Improved route planning
- ✓ Optimization of asset utilization

FLEXIBLE RESOURCE MANAGEMENT

Optimize your logistics processes to use your financial and time resources in a more targeted way.

- ✓ Optimization of incoming goods control
- ✓ More efficient organization of ramp utilization
- ✓ Improvement of time window management

FREE INFORMATION EXCHANGE AMONG ALL PARTIES

Always know where your transport is at any given moment. With Synfioo's Track & Trace application, you and your customers benefit.

- ✓ Availability of relevant information in real time
- ✓ Easier communication between all parties involved
- ✓ Swift responses possible

OPTIMIZED DECISION MAKING

In case of unforeseen incidents, notifications of disruptions can be transmitted directly to the end devices.

- ✓ Set monitoring focus on exceptional cases
- ✓ Proactive decision making
- ✓ More efficient transport processes

The benefits for your supply chain
